SDISECURE® Building Emergency Preparedness App

Access Your Building's Critical Information From Anywhere, On Any Device.

When emergencies strike, your building's critical information is more important than ever. First responders and incident managers must have quick access to accurate information about your building to handle emergencies effectively.

Yet, all too often, critical information is difficult to locate in paper books, or is unreachable because it is located in the impacted building itself.

With the SDISECURE app, you can be sure to have the information you need in the palm of your hand. Loaded on any Apple or Android tablet, phone, laptop, or desktop, SDISECURE provides your building's critical information through an easy-to-use, intuitive interface. SDISECURE delivers the most accurate property data available, constantly maintained by the SDI Team of real estate professionals. Just click to access floor plans, emergency evacuation routes, emergency contacts and more:

Emergency Contacts & Procedures

Floor Plans and Evacuation Routes
