

SDI PRESENCE LOCAL GOVERNMENT CYBERSECURITY

**Comprehensive Cyber Services
Designed for Public Sector Complexity,
Delivered by California Local Government's Trusted Advisor**

Recent cyber incidents have demonstrated how cybersecurity must be a priority for municipal government. In the event of a cyber breach, not having a firm grasp on your IT environment and its vulnerabilities leaves you flat-footed at best, negligent at worst. Without a cyber response plan in place, the operational disruption and costs of an attack can escalate quickly, and introduce greater risk over time.

With over 160 West Coast municipal and special district clients, SDI's approach to cybersecurity addresses the nuances of municipal IT environments: the interconnectivity of departments' personnel, data and infrastructure.

SDI brings both the domain expertise of municipal IT environments and a team of certified cyber experts to work with our government clients to protect their business operations and minimize potential damages.

For both IT/Business and Operation Technology/SCADA networks, SDI offers a comprehensive suite of cybersecurity services to address our clients' current state of cyber exposure and to affect immediate cyber improvements:

- Network Assessments (Vulnerability Assessments and Penetration Testing)
- Information Security (InfoSec) Assessments
- Mobile Device Security Assessments
- Firewall Evaluation and Configuration
- Incident Response Plans
- Cybersecurity Policy and Procedure Development
- Physical Security Assessments
- Data Loss Prevention
- Direct Response/Business Continuity Plan Development and Testing
- Infrastructure Inventory Programs
- Managed Detection and Response Evaluation, Procurement and Implementation
- Council/Executive Presentations

SDI's recent cyber clients include several California municipalities and special districts, delivering cyber assessment and remediation recommendations to ensure that cybersecurity measures are implemented correctly and comprehensively throughout their organizations.
